Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ito et al. (European Patent No. EP950922A1) in view of Kondo (U.S. Patent No. 6,080,535).

Ito et al. discloses a silver halide color photographic material having improved sharpness and color reproducibility, said material containing a coupler capable of releasing a photographically useful group or its precursor by a coupling reaction between the coupler and a developing agent in an oxidized form, wherein the coupler releases the photographically useful group or its precursor by an intramolecular nucleophilic substitution reaction using the nitrogen atom that directly bonds to a coupling position of a product obtained by the coupling reaction and that originates from the developing agent. The coupler of the general formula (I-3c) disclosed on page 6 is inclusive of the coupler of the instant formulae (I) and (II); also see exemplified coupler compounds 9, 11, 15, 27, 42, 46, 53, 54, 66, 68-71 and 73-77. Known silver halide emulsions are generally disclosed on pages 65-66, with no particular preference noted therein.

Kondo discloses a silver halide emulsion having enhanced sensitivity without increasing fog, said emulsion comprising tabular silver halide grains

Art Unit: 1752

wherein at least 50% of the total grain projected area is accounted for by grains having an aspect ratio greater than 5 and containing silver iodide, wherein the grains meet the relationship recited in the instant claims 5-8.

It would have been obvious to one of ordinary skill in the requisite art at the time the invention was made to incorporate the silver halide emulsion taught in Kondo into at least one silver halide emulsion layer of the photographic material of Ito et al., with reasonable expectations of achieving, absent object evidence to the contrary, the advantages taught therein as well as those achieved with the use of the emulsion.
